

WORK EXPERIENCE

- Product Owner for Digital Solutions** 2024-06 → Present
• Danieli Automation S.p.A., Buttrio (Udine), ITA
I work with customers, Energy Managers, and internal stakeholders to identify business needs and transform them into functional requirements and product roadmaps. I oversee backlog prioritization, coordinate development activities with distributed teams, monitor project execution, and support the definition of innovative analytics and reporting functionalities that help industrial customers improve energy performance and operational efficiency.
- Data Engineer** 2022-06 → 2024-05
• SMS Group S.p.A., Tarcento (Udine), ITA
I have been working on the design and development of long-term storage systems for industrial processes data. The solutions included data pipelines to retrieve data from process control databases and store them into relational data warehouses and time series databases. BI tools connected to these structures for analysis and reporting purposes.
- Computer Vision Engineer Intern** 2021-10 → 2022-01
• Danieli Automation S.p.A., Buttrio (Udine), ITA
I have experimented Computer Vision techniques for the development and evaluation of a *Multiclass Object Detection* system for the recognition of handwritten annotations on casting products, using *state-of-the-art* Deep Learning models.

EDUCATION

- Master's Degree Course in *Data Science and Scientific Computing*** 2022-10 → Present
• University of Trieste, Trieste, ITA EQF 7
I am attending the *Artificial Intelligence and Machine Learning* curriculum of the *Data Science and Scientific Computing* Master's course. I successfully passed exams on Advanced Programming and Algorithmic Design, Data Management for Big Data, Introduction to Machine Learning, Data Visualization and Information Retrieval, Probabilistic Machine Learning, Reinforcement Learning and Statistical Methods for Data Science. My current average grade is 29/30.
- Bachelor's Degree in *Internet of Things, Big Data & Web*** 2017-10 → 2022-03
• University of Udine, Udine, ITA [96/110] EQF 6
The course focused on technologies, tools and methodologies that characterize the fields of Big Data and Machine Learning, but was organized to give also solid theoretical basis of Mathematics, Statistics and Computer Science.
During my studies, I also served from 2019-01 to 2021-09 as the student representative in the university's *Nucleus of evaluation*. My main role was to analyze data from all courses of study, identifying those with some type of problems.

CONFERENCES AND PUBLICATIONS

- Intelligent water management in steelmaking:**
• **Automation for process efficiency and sustainability** *Fornasier, Marcellino et al.*
ESTEP Annual Event 2025, Udine, ITA 2015-10-28
We presented a fully automated water management system for steel plant cooling networks that integrates with automation systems to optimize water flow and pressure in real time based on production demands. By combining predictive and feedback control strategies, integrated performance reporting, and VFD-driven pumps, the system improves energy efficiency and operational responsiveness while enabling independent control of independent cooling circuits.
